

## HIPAA

For our on-premises deployments, ZyLAB is compliant with all applicable Health Insurance Portability and Accountability Act (HIPAA) requirements and standards. Please contact us should you have questions about our HIPAA compliance for the SaaS deployments of ZyLAB ONE eDiscovery.

HIPAA requires organizations engaged in handling electronic Protected Health Information (ePHI) to implement the necessary systems, procedures, and policies to secure such information.

More information around HIPAA can be found here: <http://www.hhs.gov/ocr/privacy/index.html>

Following a stringent security assessment and updating of our policies and procedures, ZyLAB meets or exceeds HIPAA compliance standards in its data management, data hosting, and data security operations in the following critical areas of HIPAA:

- Administrative safeguards
- Physical safeguards
- Technical safeguards
- Breach notification

By meeting these requirements and standards, ZyLAB has demonstrated our ongoing investment in enterprise security, compliance and control for our customers. In addition, this milestone will help to unlock new opportunities for all types of customers, most importantly, those in the healthcare industry.
